(a) Theory: iteration provably increases error
relative risk $R(t)/R(0)$
integration time t
one-step optimum ($t = 0$)
SNR $\sigma_s^2/\sigma_n^2 = 4$
SNR $\sigma_s^2/\sigma_n^2 = 1$
SNR $\sigma_s^2/\sigma_n^2 = 0.25$
(b) CT: PSNR falls monotonically with steps
PSNR gain over input (dB)
inference steps (Euler)
one-step regression
flow, $r = 1$
flow, $r = 2$
flow, $r = 3$
(c) Natural images: same decline
PSNR gain over input (dB)
inference steps (Euler)
one-step regression
flow, $r = 1$
flow, $r = 2$
flow, $r = 3$
